Set static IP for Raspberry Pi

1. Open config file

   ```
   sudo nano /etc/dhcpcd.conf
   ```

2. Add the following in the config file:

   ```
   interface [NETWORK]
   static ip_address=[STATIC_IP]/24
   static routers=[ROUTER_IP]
   static domain_name_servers=[DNS_IP]
   ```

3. Example:

   ```
   interface wlan0
   static ip_address=192.168.1.128/24
   static routers=192.168.1.1
   static domain_name_servers=192.168.1.5
   ```
